

*'We installed Concrete Preservation Technologies' Duoguard 500 product on two bridges in the North East. CPT helped considerably in forming the initial specification and advising on the optimum solution for our structures. The contractor received excellent on-site support from CPT who offered the flexibility inevitably required to support a bridge refurbishment job.'*

*'Due to the significant distances we have to travel to our structures in Northumberland we were particularly keen to use a remote monitoring solution. CPT provided the complete system oversaw the installation and have constantly updated us on the performance of the system. The quality of service provided by CPT was a significant factor in us choosing to use their services on the second bridge repair.'*
